

TIFF Splitter 1.0

This is an application to batch split pages of multipage TIFF documents.

Overview

- A simple, flexible and yet powerful interface to split TIFF files into TIFF or any other image files.
- Not only files, but include folder and subfolder also having the TIFF files to be split.
- Import list of TIFF files in text file.
- Split TIFF and create single page image files.
- Split TIFF basis the page range specified; for e.g., Page no. 10 - 15 in one file and 20-27 in other TIFF file.
- Split selected page range only and not all the pages of TIFF into other image format.
- Split TIFF at a specified interval; for e.g., split TIFF at every 10th page.
- Various options for output files, like selected pages into single page file or multipage files or multiple files.
- Numeric sequence for naming all the multiple TIFF files.
- Export the list of TIFF files separated by a tab in the text file.
- Image settings can be changed as per the output type selected.

A. Managing Files

a. Adding Files: You can add image files, you want to convert into TIFF file. There are four ways to add the files in the grid.

(i) Drag and Drop Files

You can just drag and drop files and folders into the application and it will search for the supported file types and add into the application.

(ii) Choose the files you want to add into application.

Press  and choose the files you want to add.

(iii) Add folder and sub-folder with files into it.

Press  if you want to add all the files in one folder. You can select Include subfolder check box if you have files within sub-folder. If this check box is checked then application looks for supported file types into sub-folder also.

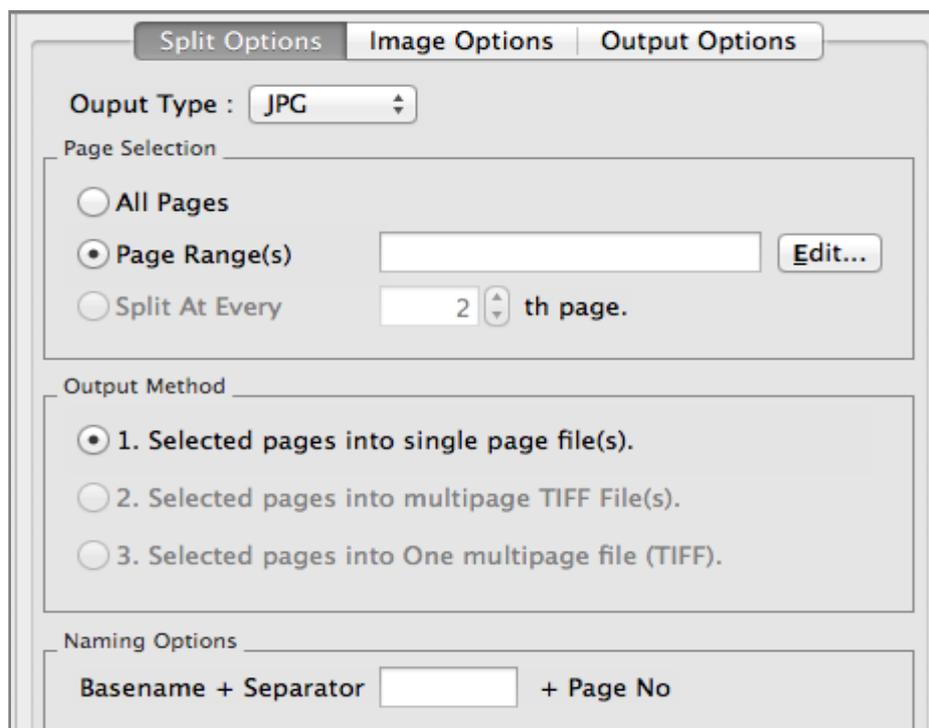

(iv) Import Files

You can choose this option by clicking at  to add files into application if you have list of files into a text file. You can also copy and paste your list into text box.

b. Deleting Files: If you want to delete any file in the grid, select the file and right click -> Remove Selection or you can press Delete button on your keyboard as well or click at . If you want to delete all the files in the grid, either right click on any file -> Remove All or click at .

B. Split Options

You can customize the split as per your requirement and hence, the application offer the different split options for you. Here's a look at all the options available in TIFF Splitter 1.0.

a. Output Type

You need to select the output type after conversion. Default option is TIFF. You can select various options available, like JPEG, PNG, GIF and BMP.

b. Page Selection Options

With this option, you can select the pages in the file as per your requirement in the output document.

There are three Page Selection options.

- i. All Pages
- ii. Page Range(s)
- iii. Split at every nth Page

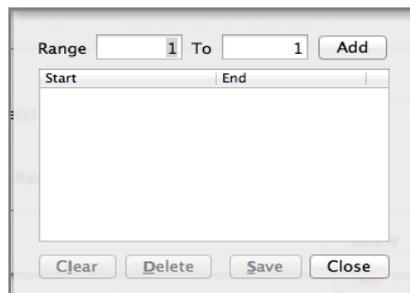

(i) All Pages

This option is to split all the pages into individual single page files. For example, you have a 20 page TIFF file and if you split it with this option the application will create 20 single page files.

(ii) Page Range(s)

In this option you can give range of page numbers you want to split. For example, in a 20 page TIFF file, you want to split 11-15 pages. You can give more than one ranges, Like 11-15, 3-7 and 17-19.

To give range, click at and you can give range in the Edit Range dialog box opens and press "Save".

(iii) Split at every nth page With this option, you can give page steps in which you want to split your TIFF file. For Example, If you have a 50 Page TIFF file and you want to split the file from every 5th page and create 10 files with each having 5 Pages. To split like that you just give 5 here and the application will split the file from every 5th page.

c. Output Method

There are 3 output options which depends on page selection option you choose.

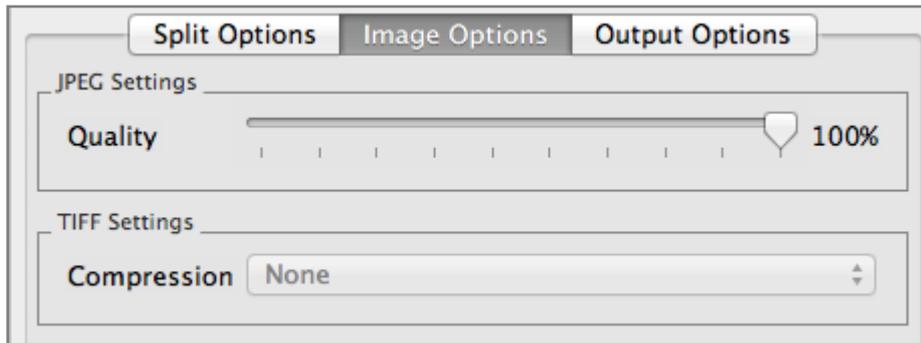

- i. **Selected pages into Single page file**
This is the default option and it will split the selected document into multiple single page files.
- ii. **Selected pages into multipage TIFF file(s)**
This will split the selected pages into multi-page PDF/TIFF files basis the page selection options.
- iii. **Selected pages into one multipage TIFF file**
This will convert all the selected pages from the file(s) into one TIFF/PDF file.

d. Naming Options

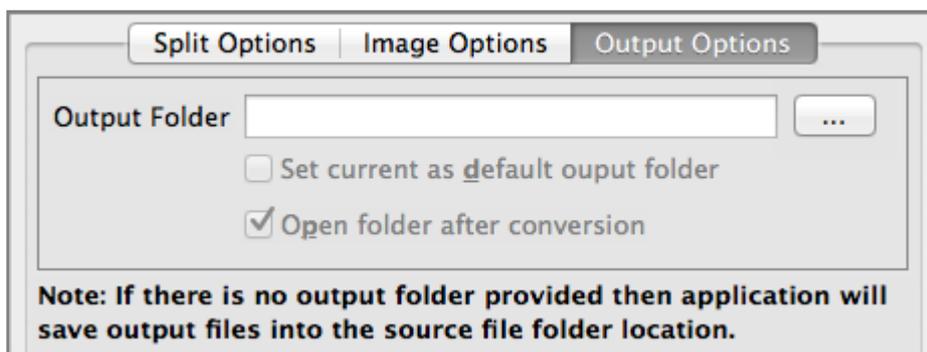

You can choose the Separator between the Base Filename and Page Number. It creates the pattern based on your inputs and name the newly created split files. For example, when you convert one 12 page TIFF Document into JPEG files then the application will create 12 JPEG files and it will be named as Base Name + Separator (Which you can choose) + Page Number. Therefore, if your TIFF Document is Office.TIFF and separator is - then it creates 12 files as Office-01, Office-02.....Office-12.

C. Image Options

You can choose the image settings as per the output format selected.

D. Output Options

You can choose the output folder, where you want the file to be saved. You can also set the default Output folder for all the conversions.

If you wish to open the folder immediately after the conversion is over, you can select the option "Open folder after Conversion".

D. Export Export

You can export list of files you can see in file grid into text delimited text file. All the columns you can see will be in exported text files separated by a tab.
